DETAILED ACTION

Double Patenting

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the “right to exclude” granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 1-5, 7, 8 and 11-16 are rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1, 9 and 10 of U.S. Patent No. 6,687,037 in view of Lee U.S. Patent Application Publication 2001/0050895 with of EP 1022731 to Arai et al.

Although the conflicting claims are not identical, they are not patentably distinct from each other because the patent claims provides for a optical scanning device having a focusing element including a stepped profile for producing different focusing characteristics where the relative step heights between adjacent steps of said pattern

element include a relative step height having an optical path substantially equal to $a\lambda_1$, wherein a is an integer and $a > 1$.

The patent claims do not provide for a third focusing characteristic and having an element of a birefringent material of a non-periodic profile for producing such focusing difference/wavefront modification.

However, this is merely an alternative way to provide such focusing difference/wavefront modification using particularly a structure/element with the birefringent material as taught by Lee U.S. Patent Application Publication 2001/0050895 with of EP 1022731 to Arai et al, see Office action mailed on 06/12/2008 regarding explanation of the above reference's teachings.

It would have been obvious to one of an ordinary skill in the art at the time of the invention to use such alternative type element producing and providing focusing difference/wavefront modification for a third wavelength.

Allowable Subject Matter

Claim 6 is allowed.

Claim 9 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
